
National Competency Measurements 2026

School results analysis & review of indicators

Scope	Grades 6, 7, 10 and 11
Subjects	Digital, English, History, Mathematics, Reading Comprehension, Science
Student results	720 individual results across 24 subject-and-grade groups
Prepared for	School leadership
Status	Interim – remaining grades expected after 5 June 2026

This report turns the raw competency measurement files into a picture school leadership can act on. It reviews the indicators in use, adds a set of stronger ones, and highlights where the school is doing well and where attention is needed. An interactive dashboard accompanies this document for exploring the same data subject by subject.

[Open the interactive dashboard →](#)

How to read this report

Every student receives a score on a national scale (roughly 1100–2100 points). Each score falls into one of seven competency levels. The level names below are the official Hungarian categories with a short English label used throughout this report.

Level	Official name	English label	What it means for a student
L1	Problémás	Critical	Below the minimum – needs urgent support
L2	Gyenge	Weak	Below the minimum – needs support
L3	Minimum	Minimum	Minimum acceptable level reached
L4	Alapszint	Basic	Solid, expected level for the grade
L5	Jó	Good	Performing well, above expectation
L6	Példás	Exemplary	Strong, well above expectation
L7	Dicséretes	Outstanding	Outstanding performance

Levels 1–2 = below the minimum standard (“at risk”). Level 3 = minimum reached. Levels 4+ = at or above the solid expected standard. Levels 5+ = performing well.

The indicators used

Average & median	Two views of the typical score. When they differ, a small group is pulling the average.
Spread (SD / CV)	How far apart students are. A wide spread means a very mixed group.
At-risk rate	Share of students below the Minimum level – the key early-warning number.
At Basic+ rate	Share reaching the solid expected standard (Level 4 or above).
Vs national	School average vs the national average – as a point gap (school minus national).
Trend & CAGR	Direction over five years and the average yearly growth rate (“éves átlagos növekedési ütem”).

A note on group size: “n” counts the students who actually sat a given test. Grade 11 has only 8–9 students per subject – with a group this small, one student changes a percentage by 11–12 points, so its figures swing easily from year to year and should be read as indicative, not precise. Grades 6, 7 and 10 are normal-sized year groups (37–42 students); a few students per subject were absent, so “n” sits slightly below the full year group.

Executive summary

STUDENT RESULTS 720 across 24 groups, 6 subjects	OVERALL AT RISK 17% 123 students below Minimum	IMPROVING GROUPS 6 of 24 rising 5-year trend	GROUPS TO WATCH 5 of 24 falling or volatile trend
--	--	--	---

The picture in brief

Across the four grades measured, about 17 in every 100 students sit below the minimum standard. The school's clearest strength is **English**, where most groups reach the expected level or beyond; the area needing most attention is **Reading Comprehension**. Results are generally strongest in Grade 10 and weakest in Grade 11 – though Grade 11 groups are very small and should be read with care. 6 of the 24 groups show a genuinely rising five-year trend, while 5 are falling or moving erratically.

Left: 2026 average score (the colour reflects the score level, not a pass/fail line). Right: share of students at risk (below the Minimum level).

[Explore every cell in the dashboard →](#)

Where the school is doing well

- **English, Grade 10** – 100% at Basic level or above, 0% at risk; rising trend.
- **Maths, Grade 10** – 91% at Basic level or above, 0% at risk; rising trend.
- **History, Grade 10** – 91% at Basic level or above, 0% at risk; rising trend.
- **English, Grade 7** – 88% at Basic level or above, 0% at risk.
- **Digital, Grade 10** – 85% at Basic level or above, 0% at risk; rising trend.
- **Science, Grade 10** – 81% at Basic level or above, 3% at risk.

Improving over five years: Digital Gr10, English Gr10, History Gr7, History Gr10, Maths Gr10, Reading Comp Gr10.

Where attention is needed

- **History, Grade 11** – 62% of students at risk (5 of 8), average in Level 2 (Weak).
- **Science, Grade 11** – 50% of students at risk (4 of 8), average in Level 3 (Minimum).
- **Digital, Grade 11** – 44% of students at risk (4 of 9), average in Level 3 (Minimum).
- **Reading Comp, Grade 11** – 44% of students at risk (4 of 9), average in Level 3 (Minimum).
- **Science, Grade 6** – 40% of students at risk (15 of 37), average in Level 3 (Minimum).

Largest one-year drops vs 2025: Reading Comp Gr6 (-7.6%), History Gr11 (-6.1%), English Gr6 (-5.2%), Digital Gr7 (-4.3%), Digital Gr6 (-4.0%).

Suggested questions for the leadership discussion

- Reading Comprehension and Science in the lower grades carry the highest at-risk shares – is there a shared literacy and reasoning gap feeding both, and which year group should be the first focus?
- Grade 10 performs strongly across almost every subject while Grade 11 sits much lower – is this a real cohort difference, a small-group artefact, or something about the transition between the two years?
- Several subjects dropped against 2025 even where the five-year trend is still positive – is this a one-year dip to monitor, or the start of a change worth acting on now?
- Where the school sits below the national average, what specifically is the comparison group, and is the gap concentrated in particular levels of student?

[See the strengths and pressure points visually in the dashboard tour →](#)

Grade 6 – subject by subject

Grade 6 has 37 students in the year group, with 35–37 sitting each subject test, so its figures are statistically reliable. It is the school's widest mix of ability and carries the heaviest at-risk load of the lower grades.

Subject	n	Avg	Median	Level	CV%	At risk	Basic+	vs Nat.	Chg 25	Trend
Digital	36	1539	1560	L3	9.6	17%	53%	+15	-4.0%	stable
English	37	1730	1732	L4	6.3	3%	76%	+227	-5.2%	stable
History	36	1511	1523	L3	11.8	25%	42%	-21	-1.1%	stable
Maths	36	1496	1521	L3	9.4	31%	31%	+16	-0.8%	stable
Reading Comp	35	1419	1407	L3	11.0	34%	26%	-50	-7.6%	stable
Science	37	1462	1489	L3	10.7	40%	24%	-11	-1.8%	stable

The "vs Nat." column compares the 2026 school average with the 2025 national average – green when the school is ahead of the country, red when behind. The 2026 national figures have not been released yet, so this is a provisional comparison against the most recent national data available.

Within Grade 6, **English** is the strongest subject (76% at Basic level or above) and **Science** needs the most attention (40% of students at risk).

[Open Grade 6 cell-by-cell in the dashboard →](#)

Grade 7 – subject by subject

Grade 7 is the largest year group – 42 students, with 41–42 sitting each test. It generally improves on Grade 6 and several subjects show a rising trend – a positive signal.

Subject	n	Avg	Median	Level	CV%	At risk	Basic+	vs Nat.	Chg 25	Trend
Digital	42	1548	1534	L3	13.0	24%	48%	-29	-4.3%	stable
English	42	1818	1790	L4	7.7	0%	88%	+242	-0.1%	stable
History	41	1523	1530	L3	12.0	24%	44%	-47	+2.6%	rising
Maths	42	1525	1498	L3	10.4	33%	43%	-28	-2.7%	stable
Reading Comp	42	1541	1490	L4	12.8	14%	50%	+3	-1.5%	volatile
Science	42	1533	1518	L3	10.9	19%	43%	-20	-1.9%	stable

The “vs Nat.” column compares the 2026 school average with the 2025 national average – green when the school is ahead of the country, red when behind. The 2026 national figures have not been released yet, so this is a provisional comparison against the most recent national data available.

Within Grade 7, **English** is the strongest subject (88% at Basic level or above) and **Maths** needs the most attention (33% of students at risk). Rising trend in: History. Watch the trend in: Reading Comp.

[Open Grade 7 cell-by-cell in the dashboard →](#)

Grade 10 – subject by subject

Grade 10 has 37 students in the year group. Between 2 and 5 were absent for each subject test, so the results below cover 32–35 students. It is the school's strongest year by a clear margin: at-risk shares are near zero and most subjects reach Basic level or above.

Subject	n	Avg	Median	Level	CV%	At risk	Basic+	vs Nat.	Chg 25	Trend
Digital	34	1702	1664	L5	9.0	0%	85%	-4	+5.9%	rising
English	32	1953	1942	L5	6.7	0%	100%	+140	+0.9%	rising
History	34	1825	1853	L5	10.9	0%	91%	+65	+13.9%	rising
Maths	35	1722	1701	L5	7.2	0%	91%	+66	+4.7%	rising
Reading Comp	34	1616	1564	L4	11.0	6%	76%	+27	+1.7%	rising
Science	32	1743	1784	L5	11.6	3%	81%	-11	+8.7%	volatile

The "vs Nat." column compares the 2026 school average with the 2025 national average – green when the school is ahead of the country, red when behind. The 2026 national figures have not been released yet, so this is a provisional comparison against the most recent national data available.

Within Grade 10, **English** is the strongest subject (100% at Basic level or above) and **Reading Comp** needs the most attention (6% of students at risk). Rising trend in: Digital, English, History, Maths, Reading Comp. Watch the trend in: Science.

[Open Grade 10 cell-by-cell in the dashboard →](#)

Grade 11 – subject by subject

Grade 11 has only 8–9 students per subject. Its results are the lowest of the four grades, but with a group this small a single student shifts every percentage substantially – read this page as indicative.

Subject	n	Avg	Median	Level	CV%	At risk	Basic+	vs Nat.	Chg 25	Trend
Digital	9	1475	1476	L3	10.7	44%	44%	-255	+9.2%	stable
English	8	1681	1654	L4	9.1	12%	50%	-145	+1.6%	stable
History	8	1297	1285	L2	11.1	62%	0%	-503	-6.1%	falling
Maths	9	1595	1598	L4	4.8	0%	56%	-163	+26.9%	volatile
Reading Comp	9	1398	1456	L3	11.9	44%	22%	-305	+6.0%	stable
Science	8	1447	1428	L3	11.9	50%	38%	-331	+7.2%	volatile

The “vs Nat.” column compares the 2026 school average with the 2025 national average – green when the school is ahead of the country, red when behind. The 2026 national figures have not been released yet, so this is a provisional comparison against the most recent national data available.

Within Grade 11, **Maths** is the strongest subject (56% at Basic level or above) and **History** needs the most attention (62% of students at risk). Watch the trend in: Maths, Science.

[Open Grade 11 cell-by-cell in the dashboard →](#)

Five-year trends

Each cell shows one subject and grade: the trend label and the five-year compound annual growth rate (CAGR / “éves átlagos növekedési ütem”). A single year can rise or fall for many reasons – the five-year shape matters more than any one step.

Subject	Grade 6	Grade 7	Grade 10	Grade 11
Digital	stable -0.5%/yr	stable +1.5%/yr	rising +4.8%/yr	stable -1.4%/yr
English	stable +1.5%/yr	stable +1.1%/yr	rising +1.5%/yr	stable -0.8%/yr
History	stable -0.3%/yr	rising +1.3%/yr	rising +8.4%/yr	falling -8.6%/yr
Maths	stable +1.8%/yr	stable +1.7%/yr	rising +4.9%/yr	volatile +0.7%/yr
Reading Comp	stable +0.5%/yr	volatile +4.3%/yr	rising +2.1%/yr	stable -1.0%/yr
Science	stable +1.4%/yr	stable +0.8%/yr	volatile +4.1%/yr	volatile -2.3%/yr

Green = rising, amber = volatile, red = falling, grey = stable.

Data gaps, cautions and next steps

Gaps in the current files

- The national 2026 averages are not yet in the files (marked N/A). Until they arrive, 2026 school scores are compared provisionally against the 2025 national figure.
- History and Digital in Grade 11 are missing their 2022–2023 history, so their long-term trend rests on fewer points.
- Grades 10 and 11 have only 8–9 students per subject; their percentages are sensitive to a single student.
- In History Grade 11 one of the nine listed students has no recorded score, so that group is reported as $n = 8$.

When the remaining grades arrive (after 5 June)

The remaining grades are expected in the same file layout. Because of that, the same process can simply be re-run: the parser, the indicators, the dashboard and this report all regenerate from the CSV files – no manual rebuilding is needed.

Recommended focus for the school

- Treat the at-risk rate as the headline number to track each year, subject by subject and grade by grade.
- Start where it is largest – the lower grades in Reading Comprehension and Science – and look for a shared underlying cause rather than treating each subject separately.
- Use the five-year trend, not a single year, to decide whether something is genuinely changing.
- Keep watching the spread, not only the average: a stable average can hide a widening gap between strong and weak students.
- Revisit this analysis once the full set of grades is in, so the school sees a complete vertical picture from the youngest to the oldest year.

This report and the accompanying interactive dashboard were generated directly from the competency measurement CSV files. All school-side figures (averages, spread, level distributions, at-risk and Basic+ rates) were recomputed from the individual student scores and cross-checked against the totals in the original files.
